GR CARBONS

Plant logins

Sign-in sheet · 15 Oct 2026

Sign in with the user id, not the email. The six plant logins use Welcome!123 unless that person has already chosen a new password. Plant Entry is created on Admin → Users. Its password is the temporary password entered on that screen, and it is emailed. The nyraservices login keeps the password issued to Nyra.

User id	Password	Screens
admin@grcarbons	Welcome!123	Plant dashboard. Raw Material, including gate receipt. Execution, including quality. Admin: users, suppliers, Destoner CTC allocation, kiln parameters, work orders, Stock Reallocation. Does not dispatch, does not open Masters, and does not save release.
manager@grcarbons	Welcome!123	Plant dashboard. Raw Material, including gate receipt, debit note, and release. Execution, including quality. Dispatch. Reports. Admin, same as the administrator. Does not open Masters.
rms@grcarbons	Welcome!123	Week dashboard of our-weight kilograms. Raw Material → Inbound prep (bag generation and RMS outward), release, and raw-material reports. No gate receipt and no supplier name. No execution, dispatch, admin, or masters.
activation@grcarbons	Welcome!123	Week dashboard of the bags this person saved. Execution → Activation: kiln feed, kiln output, and destoning. Quality tabs stay closed.
postactivation@grcarbons	Welcome!123	Week dashboard of the bags this person saved. Execution → Post activation: screening through blending. The quality tab stays closed.
quality@grcarbons	Welcome!123	Week dashboard of quality checks. Lab on Inbound prep. Kiln output quality, destoning quality, and post-activation quality.
Plant Entry	Emailed at creation	Create this login on Admin → Users and choose Plant Entry. Gate receipt only. The supplier is shown. No inbound prep, release, execution, dispatch, reports, admin, or masters.

A Production Planner sees the same screens as the Plant Manager. A shop-floor operator can run Activation and Post activation machines, and does not open quality.
